Investment policy

OP-Private Fixed Income Strategy is a bond fund, with the funds mainly invested in bond markets in Europe and the OECD countries. The fund is an AIF fund based on the Alternative Investment Fund Managers Directive. The Fund's investments are mostly implemented through other funds, which ensures a high degree of diversification across fixed-income asset classes and issuers. In its investment operations, the Fund may also use derivative instruments in order to hedge against the risk of adverse market movements, to replace direct investments and to promote otherwise effective portfolio management. The portfolio manager will decide whether or not to hedge the Fund's non-euro investments against currency risks. The modified duration of the Fund, a measure of the price sensitivity of a bond to interest rate movements, typically fits in the range of 4.5-6.5, which means a negative value change in the fund as a percentage, if interest rates increase by one percentage point. If interest rates fall, the Fund's value increases correspondingly. The fund is an active fixed-income asset management fund that seeks good yields with moderate risk in all market conditions. The Fund's investments will be changed depending on market conditions. The investment decisions particularly emphasise weightings between fixed income asset classes (e.g. money-market instruments, government bonds, corporate bonds with higher and lower credit ratings, convertible bonds), and adjustment of the Fund's interest rate risk. The fund is a AIF fund, based on the Alternative Investment Fund Managers Directive, since it may invest in vehicles not available to funds under the UCITS Directive.

The Fund promotes environmental and social characteristics and, to ensure it, uses environmental, social and governance (ESG) analysis and excludes certain investments. For more information about the ESG methods used, see the fund prospectus. The "do no significant harm" principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

Responsibility

Responsible investing

Exclusion

The fund follows [OP Asset Management's principles for responsible investment](#). The consideration of responsibility in the investment analysis and decision making provides additional information in addition to the traditional financial and market information. The significant aspects of responsibility can in the long run affect the financial success of the investment objects and thus the return.

Active ownership

The fund excludes from its active, direct investments manufacturers of controversial weapons, mining companies that produce coal, electricity companies that use charcoal and companies that have violated international standards, and which have not been susceptible to impact. [The list of excluded investment items is public](#).

Violation of international standards

OP's funds participate in domestic and foreign general meetings in accordance with [OP Fund Management Co's Ownership Policy](#), which takes responsibility into account. All in all, OP's funds participate annually in more than one thousand general meetings. OP Funds utilize the Annual General Meetings Institutional Shareholder Services Annual General Meeting analysis.

International standards, such as the UN Global Compact, set the minimum level of responsible business operations. OP Asset Management affects through OP funds that make active, direct investments such companies that are considered to have violated international standards. The goal is to get companies that have violated the standards to change their business and start to comply with the international standards in their business. We use external service provider to identify violations of international standards.

Thematic impact

OP Asset Management also affects companies through various themes of responsibility, such as issues related to climate change.

Read more about the OP Funds' practical ownership influence in [the overview of responsible investment](#) that is published twice a year.

Coverage
The portfolio's carbon intensity is the weighted average of the portfolio companies' carbon dioxide intensity. The carbon footprint takes into account companies' greenhouse gas emissions in tonnes at level 1 and level 2 in relation to the company's turnover (million dollars).

Prevention of pollution

0.2 %

The ESG risk level indicates how well the companies included in the portfolio take account of the risks and opportunities related to environmental concerns, social concerns and corporate governance concerns relative to their sector. The companies are scored from 0 to 10 and then divided into seven ESG risk-level categories (AAA–CCC). The higher the score, the better the company included in the portfolio has prepared for ESG risks and opportunities.

Distribution of companies' ESG risk levels

The portfolio's ESG analysis in relation to reference portfolios

	ESG	Carbon intensity	Green revenues
